Skills

Languages: Java, Swift, Python, HTML/CSS, Go, R, SQL, JavaScript, Scheme

Technologies & Development Tools: Git, Docker, XCode, Linux

Non-Technical: Public Speaking, Chinese (Native)

Coursework

Data Structures

Designing Information Devices and Systems I

Multivariable Calculus / Linear Algebra / Discrete Mathematics & Probability Theory

FreeCodeCamp Front-End Development Certification

Startup Engineering, Stanford University (Coursera)

Awards

2nd Place, Facebook Global Hackathon Finals, Nov 2016

2nd Place, Original Advocacy, CHSSA State Tournament, Apr 2016

National AP Scholar, July 2015

Activities

Hackers@Berkeley
Berkeley Sports Analytics Group

Education

University of California, Berkeley

B.S., Electrical Engineering & Computer Science

GPA: 3.57, Expected: May 2020

Employment

Make School

San Francisco, CA

Student Ambassador

Oct 2016 – Present

- Representative for Make School community and brand
- Provided workshops and presentations at hackathons and similar educational events
- Identified and prepared talented students as Make School Summer Academy applicant

iOS Game Development Instructor

Jun 2016 – Aug 2016

- Taught Swift programming, XCode, and the SpriteKit game development framework
- Assisted with migration of Make School curriculum from Swift 2 to Swift 3
- Admitted 150+ students as admissions officer for the Summer Academy program
- Youngest instructor employed in company history

Wireless Embedded Systems Laboratory

Berkeley, CA

Lab Assistant

Aug 2016 – Present

- Assisted Berkeley's WEB and AmpLab Ph.D. candidates with research projects
- Managed candidates' software with Git version control and Unix system administration
- Wrote scripts in Python and Go to automate execution of candidates' project tests
- Studied Operating Systems, Internet Protocols, Sensor Networking, and basic electrical engineering skills including soldering and circuitry

Projects

FlightBot

November 2016

<https://devpost.com/software/flightbot>

- SMS mobile application for searching and booking flights via SMS text and phone call
- Utilized Python and Flask to set up Web Server for IBM Watson chat bot
- Created chat bot with Node-Red flow and the IBM Watson Conversation API
- Won Amadeus API Award and Twilio API Award

Detroit Student Transport

October 2016

<http://devpost.com/software/detroit-student-transit>

- Cross platform service aimed at tackling Detroit's public transportation system.
- Designed information storage database using Firebase backend
- Worked with Google Maps API and Apple Core Location framework
- Won Facebook – Most Open and Connected App Award

AutiBot

October 2015

<http://devpost.com/software/autibot>

- iOS application that detects a children's risk towards developing autism
- Designed in-app game to test user reaction time
- Configured Muse Headband with LibMuse SDK to record user reaction time values
- Created risk extrapolation model using Microsoft Azure's Machine Learning Platform
- Won MHacks 6 Best Hack for Social Impact Award, Best Money Saving Hack Award, and Best Use of Microsoft Azure Award

RoundAbout

August 2015

<https://itunes.apple.com/us/app/round-about/id1027049535?mt=8>

- iOS mapping application that generates the most distance efficient route through multiple user-entered destinations
- Coded an optimization solution to the NP-Incomplete Traveling Salesman Problem
- 1000+ App Store Downloads and 10000+ App Store Impressions
- 2015 Make School Summer Academy Most Outstanding App Award
